

POSTERCAST INSTRUCTIONS

2. SciVee Registration Instructions. The deadline for completing your poster and SciVee postercase is fast approaching: March 9, 2010. You should aim to get it done before that so not everyone in the class bogs down the SciVee server at the last minute. Here are the instructions for getting your SciVee registration and free license to do a postercast.

- Go to <http://www.scivee.tv/> and click register in the top right corner to create a new account.
- Use your Senior Sequence username and e-mail address to create your SciVee profile (if you don't know what that is you can find it here: http://www.seniorsequence.net/images/uploads/SenSeq_username-email_2010.pdf)
- SciVee will send you an email to complete the registration process

*If your username is already taken on SciVee, create a similar one. Then tell Professor Pezzoli you had to make this change, and send him your new username (plus the email you used): kpezzoli@ucsd.edu

*If you have trouble registering please contact Willy Suwanto at willys@sdsc.edu

*The deadline for SciVee registration is February 22, 2010 at 5pm. Ken Liu will come into class on Tuesday, Feb. 23 to answer any questions you may have about creating a poster cast. Be sure to come for that.

SciVee Postercasts (copied from the class web site)

A SciVee Postercast is created when you combine: a video with your poster. After you upload your video and poster, you can select areas of your poster to appear as your video plays to create a compelling record of your poster presentation to share with your colleagues.

To learn more about creating a postercast, check out the [tutorial](#) or the [postercast help](#) section on the SciVee web site. <http://www.scivee.tv/help/view/157>

Combining your video with your poster will allow viewers to really get a closer look at your findings/data.

Using SciVee's synchronization tool, you can select parts of your poster to pop up on the screen at specific points as your video/audio plays. A postercast is an excellent way to document your presentation and quickly share with many other people the main points of your research.

Your postercast will be limited to 3 minutes (strictly enforced). This is enough time to cover the major highlights of your poster effectively. We think SciVee postercasts will help spread the word about your research.

Besides the SciVee postercast you are encouraged to use Multimedia in more inventive ways (a mini-documentary showcasing your research teams accomplishments). But this is not required.
